

## Queensland Beekeepers' Association

### Weekly Varroa Mite Update – Week Ending 25 January 2023

The detection of *Varroa destructor* in Newcastle on the 22<sup>nd</sup> June 2022 has created much anxiety within the Australian beekeeping industry. In an effort to streamline our communications to our members the QBA will now offer weekly updates to our members and affiliate clubs giving insight into our current areas of focus.

We actively encourage all beekeepers to undertake varroa mite surveillance activities on managed hives and report the results (including negative results) to the Bee 123 portal. For more information on the Bee 123 portal please click [here](#).

### Weekly Update 25 January 2023

#### Bee 123 data to date:

Total beekeepers reporting results	432
Total Hives checked	3895
Total hives reported	15978
Total No. of Recreational Beekeeper Surveys:	298
Total No. of Commercial Beekeeper Surveys:	130
<b>Mites found or suspected</b>	<b>0</b>

### Biosecurity Queensland and QBA weekly update 25 January 2023

#### Varroa Mite Prevention and Preparedness Program

#### NSW General Emergency Zone declared free from varroa mite

- Beekeepers can now [apply for a permit](#) to move European honey bees and other related materials into Queensland from the NSW General Emergency Zone (GEZ) after this zone was declared free of varroa mites.
- A permit is required for anyone bringing bees, hives, used beekeeping equipment, pollen for bee feeding, and bee products, including honeycomb, into any part of Queensland from any state or territory. All permits will be subject to strict permit conditions and active compliance checks.
- Permit applications from Queensland registered beekeepers located in the NSW General Zone (Blue zone) will be prioritised and a dedicated case manager will be assigned to manage the process.
- In the coming weeks, owners of non-Queensland registered hives will also be able to apply for a permit to enter, beekeepers can apply for a biosecurity instrument permit to enter Queensland.
- You can apply online for a [biosecurity instrument permit](#) or by calling the Department of Agriculture and Fisheries Customer Service Centre on 13 25 23.

### **Queensland Bee Biosecurity Officer will be attending:**

- Bayside Beekeepers Field Day event in Cleveland on the 12<sup>th</sup> February 2023.
- Gold Coast Regional Beekeepers at Nerang on the 18<sup>th</sup> February 2023

### **Biosecurity Instrument Permit applications completed**

- Approved 45
- In progress 11
- Not approved/available 5
- Total completed 61

### **Permit condition compliance inspections**

- 3 Inspections undertaken - all found to be compliant
- 1 Investigation into alleged breach completed – Warning Letter to be issued.

### **Communications**

- Additional communication material is being prepared to encourage beekeepers to check their hives and report to Bee 123:
- DAF continues to meet with the QBA and industry partners fortnightly to discuss progress with prevention activities to support keeping Queensland free of varroa mite.

### **Bee 123 QLD Surveillance Dashboard Map 25 January 2023**

The map below illustrates the current distribution of varroa mite surveillance activities reported to the Bee 123 portal. The QBA and DAF urge all beekeepers across Queensland to complete varroa mite surveillance activities immediately and report their results (including negative results) to the portal.

The blue dots represent negative surveillance results from 432 varroa mite surveillance activities reported to the Bee 123 portal since the 13<sup>th</sup> of July.

Please see the page below to review the current distribution of varroa mite surveillance reports as collated from data collected from the Bee 123 portal.

Figure 1 - Bee 123 Surveillance Reports – 24 January 2023

As a part of the response plan to varroa, each state government are required to provide a declaration of Area of Freedom from varroa mite (95% confidence that Queensland is free from varroa mite).

In order for a declaration of area of freedom to be made, a state jurisdiction must provide evidence of negative surveillance data collected from industry and government. To date, Queensland surveillance results fall drastically short of the 95% target necessary to declare area of freedom.

Since the detection of varroa *destructor* in June this year, movement control orders have largely prohibited the once 'free' movement of honey bees and their related by products across much of the east coast of Australia. Although movement controls are necessary to keep other states free from the mite, border closures have presented significant challenges not only for migratory beekeepers, but for anyone attempting to resource managed hives for pollination, placement of hives onto floral resource and securing queens & breeder queens to replace ageing queen bees for the season ahead.

In short, the state government must see a significant increase in varroa mite surveillance activities in order to declare area of freedom. In order to reach the 95% confidence level, industry and government surveillance activities must increase as a matter of immediate priority.

Varroa mite surveillance and the reporting of the surveillance is a practice that is here to stay especially whilst an active response and eradication program is in place.

Every beekeeper across the country has a biosecurity obligation to the greater industry, your fellow beekeepers and ultimately our precious honey bees that are depending on us to protect the future health and prosperity of the sector. Please, where possible, complete and report your varroa mite surveillance as a matter of priority.

Please report all surveillance activities to the Bee 123 portal. Click [here](#) to learn more.

#### **Past Events:**

The recording of AHVIC's online webinar held on 31 August 2022 can now be watched from your computer or electronic device. Please [click here](#) to watch the presentation.

The recording of the Varroa Mite Biosecurity Queensland webinar held on Tuesday 11<sup>th</sup> October is now available online and ready for beekeepers to watch at their leisure. This webinar covers topics relating to the current situation update in Queensland, reporting your surveillance results to the Bee 123 app, and applying for a permit to move honey supers, equipment for irradiation and the movement of PPE. Please [click here](#) to watch the webinar.

#### **QBA Membership:**

The Queensland Beekeepers' Association warmly welcome new members to our organisation. To complete an application for membership please visit <https://members.qbabees.org.au/join-us/>

When completing your application, please nominate your preferred branch of the QBA.
